To whom it may concern,

As the founder of Kuruka Solutions, a geospatial consulting firm, I specialize in delivering advanced Geographic Information Systems (GIS) solutions for organizations that do not have dedicated GIS teams. My expertise lies in providing actionable spatial analysis, data acquisition, cartography, and database management, particularly for sectors like renewable energy and environmental planning. Since establishing Kuruka Solutions in 2021, I have worked as a contract GIS consultant for various firms, helping them leverage spatial data to support critical project decisions and streamline geospatial workflows.

Kuruka Solutions was founded to make GIS consulting accessible, delivering powerful insights without the overhead of an in-house GIS team. In addition to my professional background, I obtained a GIS certificate from City College of San Francisco, and I have held a 4.0 GPA while completing a Geography BA at San Francisco State University. My academic foundation in Advanced GIS, GIS Programming, Remote Sensing, and Raster GIS further enhances my practical skills, allowing me to provide data-driven solutions that align with industry standards.

I am excited to bring my expertise to organizations seeking specialized GIS support on a project or contract basis. I welcome the opportunity to discuss how my services can address your organization's unique geospatial needs and contribute to your project goals. Thank you for considering my qualifications and having a look at my portfolio.

Sincerely,  
Michael Peckham
